

Introduction

The customer display is a display that shows the customer the items ordered, as well as some advertising material. To take full advantage of the customer display, it should be branded with your business colors, logo and style.

This guide aims to assist graphic designers in creating a customer display that will look great and grab the customer's attention.

Screen Resolution

The screen resolution of the customer display is typically 1024x768. It is possible to make images larger if a higher resolution screen is used, but this guide assumes the standard 1024x768.

The customer display also has configurable panel sizes. This guide assumes that you are using the default panel sizes as shown below:

Order Width	690
Message Height	90
Banner Height	210

Image Format

While it is possible to use .JPG or other standard windows image formats, .PNG is highly recommended as it supports transparency and has a good file size while preserving quality.

The sample images provided are in .PNG format.

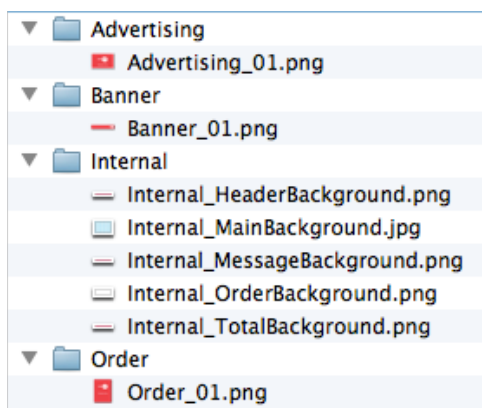

Customer Display Images

Required Images

This guide aims to assist graphic designers in creating a customer display that will look great and grab the customer's attention.

In addition to the images in the example below, you can have many "Order" and "Banner" images that cycle in sequence. The "Advertising" images also cycle in sequence, but these images are full-screen when the terminal is not being used.

1. Internal_MessageBackground.png
2. Internal_HeaderBackground.png
3. Internal_OrderBackground.png
4. Internal_TotalBackground.png
5. Banner_01.png
6. Order_01.png
